

School Partnership Proposal

WAEC • NECO • JAMB preparation and school assessment

Presented to: The Proprietor, Principal and School Management

Presented by: Michael Tochukwu Ebeh, Syllovia

29 October 2026

1. Partnership purpose

Syllovia proposes a paid school partnership that combines exam-focused learning resources with a branded school portal. The aim is to strengthen independent study, help teachers identify gaps and simplify school assessments, while giving parents a clearer view of learning progress.

The existing content library is for WAEC, NECO and JAMB preparation. It is not a complete JSS-to-SS curriculum. Schools can organise their classes and create their own assessment questions for other needs.

2. Value for students

- Read structured topic lessons, use highlighted formulas and key principles, and look up important words in plain language.
- Watch linked lesson videos while studying; practise topic quizzes and timed CBT, then review mistakes and explanations.
- Use study plans, notebooks and written practice to organise learning; seek study-assistant support outside running tests, subject to applicable limits.
- Learn practical drawings using schematic references, drawing steps, label exercises and a drawing workspace.
- Use official exam-news links and source-backed admission searches; published institutional requirements must be checked for the relevant course and session.

Learning gains depend on participation, teaching support and the student's starting point. Syllovia does not guarantee particular grades or admission.

3. What your school and teachers can do

- Apply for a portal; after approval, add school branding, organise classes and invite teachers and students. Seat limits and permissions follow the agreed licence.
- Build a school question bank by entering questions or using supported Word-content import workflows.
- Create CBT exams, choose questions and students or a class, set opening and closing dates and times, duration and attempt limits, then publish.
- Review exam activity, mark written answers, add feedback and release results. Students see results according to the school's release decision.
- Share notices and lesson assignments, monitor permitted student progress and export assessment reports.

4. Student and parent access

Students access assigned exams and their personal learning tools. They do not manage school licences, mark other students' work or see unreleased school results.

Parents connect through an expiring invitation bound to their email. A linked parent sees restricted progress summaries, not the child's raw private notes or exam answers. Students cannot revoke this parent link; only the connected guardian can end it.

5. Assessment checks and privacy

School exams require informed consent and face, desk and room camera checks before starting. Periodic camera photos and browser activity signals support staff review; they are not live video, proof of cheating or automatic misconduct judgments. Internet access, suitable devices and working cameras are needed for this workflow. Supervision photos have a seven-day retention window.

Schools remain responsible for fair assessment procedures, privacy communication, consent arrangements and support for students who cannot meet the device requirements.

6. Notifications and operational boundaries

Students can see school notices and assigned examinations through the portal. Notification email delivery is not included as a confirmed working service in this proposal: a verified notification sender is still required, even though account-verification emails work. Confirm sending readiness before relying on email alerts.

Large lesson videos may use external providers. Platform access, connectivity, content availability and any support arrangements should be confirmed in the written partnership agreement.

7. Recommended pricing — one simple termly model

The following is a recommended commercial offer, not an automatically activated charge or a signed contract. Final pricing, seats, term dates, renewal, support, taxes and payment timing should be agreed in writing.

Item	Per student, per term
Syllovia proposed fee	₦3,500
Optional school charge to parents	₦5,000
School retained gross margin before own costs	₦1,500

Clear example: 100 participating students for ONE TERM

Collected from parents: $100 \times \text{₦}5,000 = \text{₦}500,000$

Paid to Syllovia: $100 \times \text{₦}3,500 = \text{₦}350,000$

School retains before its own costs: $\text{₦}500,000 - \text{₦}350,000 = \text{₦}150,000$

This is gross margin, not pure or guaranteed profit. The school must deduct internet, devices, staffing and other programme costs. A parent charge is optional, should be transparent and should not be presented as an official exam-body fee.

Termly or yearly?

Start with termly billing to match school fee collection. At the same proposed rate, three terms cost $3 \times \text{₦}3,500 = \text{₦}10,500$ per student per year. For 100 students, the annual Syllovia fee would be ₦1,050,000. These annual figures are separate from the one-term example above; no annual discount is assumed.

8. Suggested rollout

- Book a presentation and agree the initial student group, devices and objectives.
- Confirm the partnership terms; submit your school application and await approval.
- Set up branding and classes; invite staff and enrol students.
- Train teachers to add questions, schedule an assessment, mark answers and release results.
- Run the agreed exam-preparation programme, review progress and decide on renewal before the next term.

9. Watch how Syllovia works

Watch both the platform overview and the hands-on school tutorial here:

<https://syllovia.lovable.app/watch>

The practical tutorial demonstrates adding questions, setting dates and times, selecting participants, publishing a school CBT, taking an assessment, marking written answers, releasing results, exporting results and watching lesson videos with a topic quiz.

The recordings show the actual website. The practical demonstration uses a separate tutorial school and synthetic camera-test imagery, not a real student. The recordings are not a complete demonstration of every parent or study-tool workflow.

10. Book a presentation with us

[Request a school presentation on WhatsApp](#)

Please include your school name, location, number of learners, contact person and preferred date and time. A booking request is not an appointment confirmation; we will agree and confirm the session with you.

Partnership response

School name: _____

Contact person: _____

Phone / email: _____

Expected participating students: _____

Preferred presentation date / time: _____

We look forward to discussing a practical, transparent partnership that supports your students and fits your school's operations.
